

HSI Product Datasheet

Product: IS-4110 Fiberglass Taper

Description:

The IS-4110 Fiberglass taper is an extendable hand held applicator used in conjunction with adhesive backed fiberglass mesh tape.

Application:

Used with quick set drywall material (hot mud) and plaster products to span cracks between wall panels on the interior of commercial or home construction projects. Exterior applications possible.

Technology:

Current industry technology consists of several basic configurations. The most common is the Fiba-Tape applicator which resembles a standard box taper with a finger actuated corner roller. Apla-Tech offers an applicator which is a hand held sheet metal box with a hand operated cutting device. Most common application is where the professional holds a roll of tape with their thumb and middle fingers while simultaneously supporting a 6 inch taping knife for cutting the tape.

Speed:

- 60% faster than hand/utility knife application.
- 25% faster than hand/broad knife application.
- 30% faster than “box taper” Fiba-Tape applicator.
- 35% faster than Apla-Tech applicator

Options:

- May be used with other tape products.
- Future accessories include extension pole.
- Corner Slider used to embed glass firmly into inside corners.

Ordering:

Confirm inside roll diameter of the tape you use with the 1.75” standard HSI diameter or order the optional 3” diameter tape holder.
